Quantem to expand diesel storage capacity at Pelican Point facility

15 July 2021

Quantem, the leading independent bulk liquid storage and handling company throughout Australia/NZ, confirms its application under the Federal Government's Boosting Australia's Diesel Storage Program has been successful.

Quantem will receive funding to assist in the construction of an additional 80,000 cubic metres of diesel storage capacity at its Pelican Point terminal in Adelaide.

"The diesel storage program is an important policy initiative," said Nick Moen, CEO of Quantem.

"The program will bolster Australia's domestic fuel security and safeguard future supplies for the country's transport sector and industrial supply chains which are vital to Australia's infrastructure requirements.

"As a leader in bulk liquid storage and handling, we are pleased to play our part. The investment to expand our Pelican Point terminal will add significant open access diesel storage capacity for the fuels industry in South Australia and also create employment opportunities in the area," he said.

The expansion at Pelican Point is expected to be complete by December 2023.
